

SysTools AD Migrator

Simplifying Active Directory Migration

Why choose SysTools AD Migrator?

24x7 Technical Support ♦ Partners Choice ♦ Trusted by Big Partners ♦ Zero Downtime

Security Compliant ♦ Minimal Implementation ♦ Cost Effective

SysTools AD Migrator

AD Migrator Features

User Migration

SysTools AD Migration streamlines user migration by transferring user accounts, profiles, group memberships, and attributes while preserving security settings and user-specific configurations, ensuring a smooth transition for end-users.

Group Migration

SysTools AD Migration facilitates security group / distributed groups migration by transferring group members and configurations.

SID History

SysTools AD Migration supports the migration of SID history, enabling users to retain access to resources in the target domain by preserving their previous security identifiers (SIDs), ensuring seamless access to shared files, folders, and applications.

OU Migration

SysTools AD Migration facilitates granular control over Organizational Unit migration, preserving hierarchy, offering automated mapping, and providing customization options, along with pre-migration analysis visibility for assessment.

Computer Migration

SysTools AD Migration facilitates computer migration by transferring computer accounts, group memberships, and configurations, ensuring that workstations retain connectivity, access rights, and domain integration in the target environment.

Profile Migration

SysTools AD Migration facilitates end user profile migration to maintain end user experience of no change on system and work with all applications present on the system.

Domain, Forest Migration

SysTools AD Migration simplifies AD Object migration across or within domain and forest by transferring all required attributes of the AD Objects ensuring a secure and efficient transition while preserving domain integrity and compatibility across the entire infrastructure.

Bidirectional Password Sync

SysTools AD Migration enables real-time bidirectional synchronization of password changes between source and target Active Directory environments, enforcing password policies securely and managing password complexity while ensuring consistency across domains.

Forest Migration

Supports cross-forest, intra-forest, and multi-forest migrations.

Domain Migration

Includes domain, subdomain, and multi-domain AD migrations.
