SysTools AD Migrator
Active Directory Migration Case Study

Client Background

Industry - Financial Services   **User Count** – 30k +

Introduction

◆ There are 30k users on the Source Domain with their security groups / DLs / Workstations

◆ Ask was to migrate the domain objects to another domain considering the merging.

◆ Few sets of Users are supposed to migrate to different forests.

Challenges

◆ The challenge was the volume of the users and their objects in a minimal timeline.

◆ Involvement of the existing domain merger and separate forest migration.

◆ Understand the environment and the complexity in it to maintain the flowless user experience.

Migration Strategy

◆ SysTools demonstrated the AD Migration solution which was satisfying all required features for the migration.

◆ The Import CSV feature was the key point for the bulk volume migration on the single click. Client migrated volume in few tasks.

◆ SIDHistory migration made it easy for the client to maintain the coexistence of the resources in the environment.

◆ Password Sync was set up to maintain the latest password of the user at their destination.

◆ With the feature of Existing Password migration, it made it easy for customer to proceed with migration with minimal involvement of the end user.

◆ Delta sync made client confirmable to modify property on any domain and keep it sync to destination.

◆ SysTools help client to automate most of the migration process by providing the required features and scripts from time to time.

Conclusion

SysTools help clients in defining the complexity of the environment and define migration process. Define the process to FineLine the execution and made it promising with no impact on the current business flow.
